

Delta Airlines: Airport of the Future

PROJECT TYPE

Network Data Communications

BUDGET

\$94 million

BULLOCK RESPONSIBILITIES

Project Manager

On-site Technical Evaluation

COMMUNICATE

The assignment was clear. Upgrade property, facilities and IT equipment for security compliance for this major international airline. Oh, and do so in 15 international gateway cities.

Bullock was Project Manager and provided on-site technical evaluation of local airport facilities for the alteration. The scope of technical work in construction, equipment installation and electrical and communications network construction was defined and developed. For each location Bullock qualified A & E firms, contractors, reviewed proposals, prepared contract documents, cable diagrams, and construction documents for bid packages. These 15 cities and 17 others were connected over three years to create Delta's WAN.

ALSO

In response to a dead-end implementation situation, Bullock designed an innovative, ergonomic workstation for Delta's baggage facilities that significantly increased efficiency. It is now the standard for airports around the world using IT stations in baggage makeup areas.
